ALL BULLS ARE BVD TESTED AND VACCINATED.

ALL BULLS ARE FROM C10 STATUS HERD & ARE SEMEN TESTED.

COMMISSION: PURCHASING AGENT 6%

Free delivery to nearest saleyards

within month of sale

DANDALOO STUD - FOREWORD

Greetings all,

Wasn't it great to get the gumboots off for the Christmas holidays and even air the feet over summer.

I think we even dried out and got a tan?and now we are doing the unforgivable from 2023 and we are asking for rain in 2024.

Low farmer confidence in the Labour Government saw a change to a new coalition government and farmers began to breathe. Hoping things would settle in 2024.

The reality of 2023 has hit us all in 2024 with the lamb and sheep job becoming non-existent.

The continual rising costs of fertilizer, fuel, and living - even our child labor is costing us more because the school fees have increased.

But 2023 showed us things change quickly, and we are in anticipation - ready for the interest rates to come down hopefully in time for 2025. Thanks to all our regular purchases - we know the sales have been consistent and your beef production is a testament to the quality beef you are presenting.

The bulls this year aren't bad for the lack of good feed - we have a

few corks.

Bull number 2023 (aptly numbered) he's a gem and sums up last year - tough, plenty of meat, plenty of scope and full of potential.

Bull numbered 2057 He's the future - a complete bull, all in proportion, nice barrel - STUD potential, he's all about the best to come for anyone who purchases him.

Best of luck and thanks for supporting our business - we hope you find your bull at Dandaloo that suits your farm and your production, keeping you steadfast in farming for another year.

Sale Date: 30th May, 1pm Auction on Farm

Dandaloo business motto: "Coming together is the beginning. Keeping together is progress. Working together is success"
- quote by Henry Ford.

Regards - Angus and Trish Thomson.

CONDITIONS OF SALE AND ENTRY

(No verbal instructions can be accepted)

1. **INSURANCE:** - The auctioneers can provide a cover for term or transit policies from fall of hammer, and purchasers are recommended to take advantage of this.
2. Sale to be conducted under the usual terms and conditions of the East Coast Stock and Station Agents' Association.
3. A purchasing commission of 6% will be paid to non-participating companies who are members or associate members of the New Zealand Stock and Station Agents' Association.
4. Every bull is guaranteed fertile and sound. Any complaints in writing to vendor within 12 months of purchase.
5. **PURCHASING REBATE:** All intending purchasers MUST register at the sales office prior to the sale.
A purchasing rebate of 6 % will be paid to non participating livestock companies and recognized independent livestock agents with approved credit facilities introducing and/or accompanying new buyers to the sale. Arrangements must be made with the auctioneer PRIOR TO THE SALE AND SETTLEMENT MADE ON THE BUYERS BEHALF WITHIN 14 DAYS.

DISCLAIMER

The TransTasman Angus Cattle Association Estimated Breeding Values (EBVs) contained within this sale catalogue were compiled by the Agricultural Business Research Institute (ABRI) from the data supplied by breeders. Neither Angus New Zealand nor ABRI oversee or audit the collection of this data.

OSH GUIDELINES

Under the Occupational Health and Safety Act 1992, we are required to inform people of any potential hazards:

Cattle can occasionally be unpredictable, particularly if stressed, mobbed up, or in a new environment. Please exercise all reasonable care and attention, when viewing bulls.

TACE – what is it?

TransTasman Angus Cattle Evaluation is simply a performance predicting system. It records an animal's own performance, as well as the performance of all known relatives in the herd. Using this information, it is able to build a reliable indicator of each animal's genetic potential.

Each recorded trait is measured as a plus or minus. This shows the genetic potential in that trait, for that bull, as compared to the breed average. These measurements are called EBVs – Estimated Breeding Values.

Each recorded trait is also presented with an accuracy percentage. This measures the degree of predictability ie the likelihood of passing on that recorded trait to his progeny. The more information we can collect for each animal, the more reliable the predictability of each trait, and the higher the percentage. For example, a bull with + 60 kg growth at 400 days and 90% accuracy, can be more confidently expected to transmit that extra growth to his progeny than a bull with + 60 kg at 400 days and 57 % accuracy.

This doesn't mean the bull with lower predictability is not going to pass on that trait, it just means there is less information on his ability to pass it on . There may be a number of reasons for this – for example, a young bull may have few closely related animals.

As a general rule, pick using EBVs first, and use accuracy percentages, as well as visual appraisal, to narrow down your selection.

The right bull for you - how to use EBVs

First of all, what traits are important to you? Is it fertility, calving ease, milking ability, carcass conformation and growth...? Decide on the traits that are most important to you economically, and look for a bull that is strong in those traits. Growth to weaning.

Angus NZ EBV's Explained

TransTasman Angus Cattle Evaluation (TACE) EBVs and selection indexes remove the effects of non-genetic factors (e.g. feeding regimes, animal age) from what is seen and measured to provide the best measure of an animal's genetic merit. TACE information should always be used in conjunction with other selection criteria, including visual assessment.

A BEST PRACTICE GUIDE TO SELECTING YOUR NEXT ANGUS NEW ZEALAND SIRE

A TACE Guide to Animal Selection allows you to select the best genetics for your herd in four easy steps:

1. Consider the individual EBVs of importance.
2. Consider other traits of importance (e.g. visual assessment).
3. Identify the **Angus New Zealand selection** index of most relevance to you.
4. **Rank animals** using the chosen selection index.

The majority of these steps can be undertaken online, allowing you to generate a shortlist of bulls for potential purchase ahead of sale day. The searchable version of this catalogue can be found online here www.angusnz.com.

TRANSTASMAN ANGUS CATTLE EVALUATION

The Angus New Zealand Association publishes the following TACE EBVs and Selection Indexes. Please note that only EBVs from the same TACE analysis can be directly compared.

Growth EBVs	Fertility & Birth EBVs	Carcase EBVs	Other EBVs	Selection Indexes
Birth Weight	Scrotal Size	Carcase Weight	Docility	Self Replacing
200 Day Growth	Days to Calving	Eye Muscle Area		Angus Pure
400 Day Weight	Gestation Length	Rib Fat		Heifer Dairy Terminal
600 Day Weight	Calving Ease Direct	Rump Fat		Scan below for more details
Milk (Maternal)	Calving Ease Daughters	Retail Beef Yield		
Mature Cow Weight		Intramuscular Fat		

Details about the Angus Selection indexes can be found at:
<https://breedplan.une.edu.au/media/bqjbnnbh/using-new-zealand-angus-selection-indexes.pdf>

More information, including EBV descriptions and how to use them, can be found in the **Using & Understanding TACE EBVs** booklet. Scan the QR code for more details.

MANAGING YOUR NEW BULL

When bulls leave the farm where they were bred, it can be very stressful for them, as they are leaving the security of the mob they were bred into and arrive at sale yards which are completely foreign to them. So it is important to minimise the stress and help your new bull settle into his new home. When he arrives it would be a good idea to put him with a small group of quiet cows or steers - not steers that have received H.G.P or other bulls. A reasonable paddock and some hay, and he should soon settle.

When shifting or handling your bulls allow plenty of time to do the job, so they can be handled quietly and with patience. Do not startle or poke him and NEVER use an electric cattle prod.

At mating time check your bull regularly as accidents do happen and when he is finished put him back into a good paddock with adequate feed which will also help reduce the problem of fighting.

Finally if you have any concerns, or thoughts about your bull, we are only a phone call away.

Arthrogryposis Multiplex (AM) - Neuropathic Hydrocephalus (NH) Contractural Arachnodactyly (CA) - Developmental Duplication (DD)

AM, NH, CA and DD are simple recessive gene defects, caused by the presence of a single pair of inherited genes. The red gene in Angus cattle is a common example of recessive inheritance – the gene must be present on both sides of the pedigree for full expression.

If a carrier sire and a carrier dam are mated, 25% of the progeny will be clear of the defect, 50% will be carriers, and 25% will be affected.

A DNA test has been developed to identify carrier animals so these defects can be eliminated from the breed.

After such DNA testing, you will be given one of two results;

AMF, NHF, CAF or DDF = tested free of the gene

AMC, NHC, CAC or DDC = tested carriers of the defect.

But, to assist with the identification of carrier animals (prior to DNA testing) a 'probability test' has been developed - using updated test results and animals' pedigrees, known as Geneprob.

Geneprob will identify 'at risk' animals in the breed database and assign them a status for AMS, NHS, CAS and DDS as follows;

AMFU, NHFU, CAFU and/or DDFU = free by pedigree inference, untested

AMS %, NHS%, CAS% and/or DDS% = a suspected carrier (% = level of suspicion) but un-tested. Requires testing to validate true status.

AMF, NHF, CAF and/or DDF = tested free of the defect.

AMC, NHC, CAC and/or DDC = tested carrier of the defect.

These GeneProb analysis tests are performed every seven days. Genotyping for these mutations should, with 100% accuracy, expedite elimination of these genes from the Angus population.

If you are unsure of any aspect of these genetic defects please don't hesitate to ring us directly or contact the Angus NZ on (06) 323 4484.

THE INDUSTRY STANDARD NOW HAS HIGHER STANDARDS.

**Angus GS is not resting on past accomplishments.
There's more work to be done.**

With the addition of 22,000 SNPs, Angus GS becomes the unmatched Angus specific genomic profiler. It provides greater power for traits including calving ease, birth weight, marbling, female fertility and more.

Logo displayed on all animal lots that have been SNP tested and included in a Genomic Evaluation, therefore shows Genomics under Traits Analysed. All AngusGS 75K tested animals have had parentage run by PBB DNA using the Helical system. This can include both sire and dam verification.

**Realise your operation's
full potential.**
